

## PRESS RELEASE

### **Convincing end to end package: profine to present innovative product solutions with an extensive range of services**

With its KBE, Kömmerling, and Trocal brands, the profine Group ranks among the leading providers of PVC-U window systems. At BAU 2019, the Group will be represented at Stand 528 in Hall B4.

There it will be presenting a wide range of innovative product solutions and comprehensive services that together form a highly acclaimed end to end package in the industry.

The focus of the presentation will be solutions to the megatrends of barrier-free access, regulated home ventilation and surface design of windows and doors.

For example, with "PremiPlan Plus" profine presents a premium threshold system for maximum accessibility with a high level of comfort, when installed at ground level at zero millimeters. "PremiPlan Plus" is not just a threshold, but a complete system developed in cooperation with manufacturers of other building trades. Even before its official market launch, the innovative system was the winner of the pro-K award 2018 in the category of domestic installations and technology.

The system supplier has also supplemented its wide range of home ventilation products with "ClimaTec Plus" and "ClimaTec 88", two new window ventilators for its 76 millimeter flagship systems in double and centre seal versions as well as for the highly insulating series with a construction depth of 88 millimeters.

The demand for individuality and accentuated colors is met by profine with a comprehensive range of design options: From the innovative surface technology "proCoverTec", a wide range of laminates to diverse aluminum shells.

Sliding systems are also up-to-date, and profine presents "PremiSlide 76", a compact, efficient and versatile system for the construction of sliding windows and sliding doors.

As an additional exhibition highlight, the profine project management will be presenting an extensive range of services for architects, housing associations, contract placing authorities, and manufacturers. The range of consultancy services includes planning, bids for tenders, installation, and onsite approval procedures.

"We understand system competence holistically and see ourselves as the contact for all involved in the building process. Accordingly, we want to focus not only on innovative products, but above all on our services expertise for the various players in the industry," explained Dr. Peter Mrosik, owner and CEO of profine.
