

## **Powerful end to end package: profine to present innovative window systems with an extensive range of services**

With its KBE, Kömmerling, and Trocal brands, the profine Group ranks among the world's leading providers of PVC-U window systems. At BAU 2013, the Group will be represented at Stand 309 in Hall C4. There, the profine competence centre will be presenting innovative window systems under the heading "Intelligence in planning – competence in consultancy – excellence in execution". Together with the Group's extensive range of service offers, the systems will be bundled into an end to end package that has met with high acclaim on the sector.

**7 November 2012**

Besides the high thermal insulation window and residential door systems, the inter-brand presentation will also be focusing on the new "PremiDoor 88" lift/sliding door system with an installation depth of 88 mm. Its  $U_f$  value of 1.2–1.3 W/(m<sup>2</sup>K) guarantees excellent energy efficiency. Even a passive house compatible  $U_D$  value of 0.8 W/(m<sup>2</sup>K) can be obtained with special glazing. The system features a five chamber sash and casement profile and can take elements up to 2.9 m high and a standard width of 6.5 m.

As an additional trade fair highlight, the profine competence centre will be presenting an extensive range of services for architects, housing associations, contract placing authorities, and manufacturers. The range of consultancy services includes planning, bids for tenders, installation, and onsite approval procedures, boosting reliability for construction companies.

### **System solutions for the three brands**

KBE presentations will include the multiple award winning "PremiVent" ventilation system with heat recovery. The Kömmerling presentation will be focusing on a new 88 mm sash developed specifically for foaming and automated bonding. Its foamed variant can be used with or without steel, for outstanding thermal insulation even in the colour versions.

Also Trocal will be presenting products of premium character. These include, for instance, the 88 mm aluminium composite window "AddOn" with an elegant flush-mounted look and a design that helps to improve the  $U_w$  value and can take both wind protected shutter systems and special glazing for better sound insulation.

Not least of all, the profine Group is also heading the trend with its wide range of colours. The presentation will include window solutions with the new premium surface "proCoverTec", various aluminium solutions, and a wide range of forty four colour laminates.
