

KBE 88

A ground-breaking combination

**Design
meets
function**

KBE 88 AluClip Pro window system

KBE 88

AluClip Pro window system

KBE 88 is a window and door system that already meets future standards and requirements today. It delivers outstanding quality, heat insulation and security. KBE 88 is also based on a modular concept with upgrade technologies, allowing the user to individualise both design and fittings.

AluClip Pro for optimum heat insulation

KBE 88 AluClip Pro has an aluminium facing shell that performs the static function of a conventional steel reinforcement inside the frame. Without a steel reinforcement, the window has improved heat insulation properties.

Combined advantages

PVC profiles have optimum heat insulation and soundproofing properties, as well as robust functionality. Aluminium, on the other hand, is elegant, weatherproof and available in a wide variety of colour finishes.

KBE 88 AluClip Pro allows you to benefit from the advantages of aluminium and PVC in one single system!

KBE 88 AluClip Pro window

- » Outstanding heat insulation compared with aluminium windows
- » Linear, semi-recessed window design with butt-jointed aluminium profiles
- » High stability as a result of the aluminium profile
- » Wide range of glazing options from 24 mm to 58 mm thick, from triple glazing to special functional glazing
- » Aluminium look on the outside, neutral white on the inside
- » Practically unlimited choice of aluminium shell colours with finishing techniques including Eloxal and powder coating
