Top performance in design and insulation

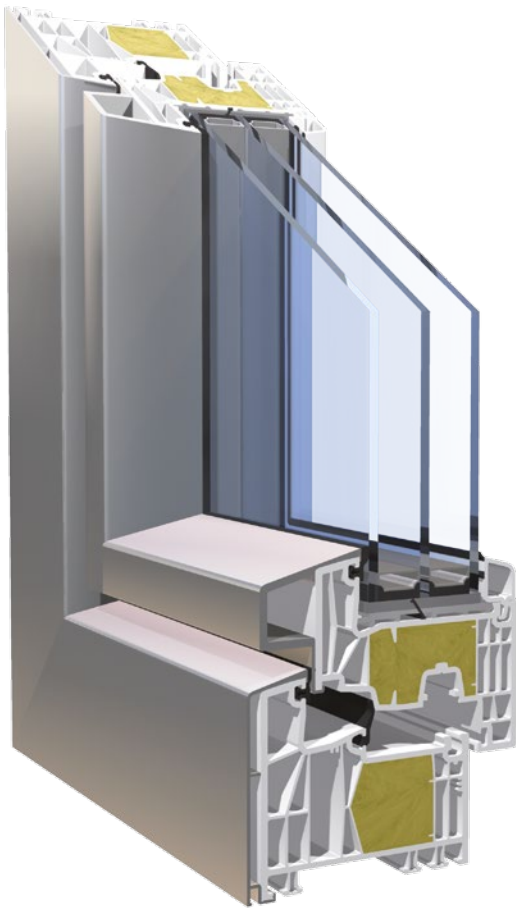

KBE 88 AluClip Pro window system with proEnergyTec

KBE 88

AluClip Pro window system with proEnergyTec

The KBE 88 window and door system is pioneering in every respect – from quality and heat insulation to security and design. It is also highly efficient and offers impressive scope for individualisation with its modular concept and innovative upgrade technologies.

Outstanding heat insulation: AluClip Pro with proEnergyTec

KBE 88 AluClip Pro has an aluminium facing shell that performs the static function of a conventional steel reinforcement inside the frame. The empty reinforcement chambers are filled with innovative proEnergyTec foam, which considerably improves the window's heat insulation performance. Environmentally friendly propellants are used to insert the proEnergyTec foam, which separates cleanly from the PVC again for recycling purposes.

KBE 88 AluClip Pro with proEnergyTec

- » Maximum heat insulation performance with proEnergyTec technology
- » Passive house certified in accordance with directive WA-15/2 – U_f value = 0.79 W/(m²K)
- » Linear, semi-recessed window design with butt-jointed aluminium profiles
- » Wide range of glazing options from 24 mm to 58 mm thick, from triple glazing to special functional glazing
- » High stability as a result of the aluminium profile
- » Aluminium look on the outside, neutral white on the inside
- » Practically unlimited choice of aluminium shell colours with finishing techniques including Eloxal and powder coating
- » Completely recyclable
