

PRESS RELEASE

Major project for profine in South Korea

After an intensive planning phase, the profine Group, together with its partner WooshinWin, managed to obtain a major project in South Korea.

The Samsung Group's "One Bailey Project" is the largest single order in the history of profine, a project in the double-digit million range.

The construction project is an exclusive apartment complex in the greater Seoul area, which comprises around 3,000 apartments, each with seven to eight windows.

The approximately 23,000 elements are made from the profine centre seal system with an installation depth of 88 millimeters and from the PremiSlide sliding system from profine, with an aluminum shell on the outside and foiled on the inside.

The client decided in favor of profine's systems primarily because of their excellent thermal insulation and the high demands on design and color.

The first shipping containers with profiles from German production will be loaded in the first quarter of 2022, the order will be implemented in the course of 2022.

"This major order in South Korea underlines the global reputation of our products and marks a further milestone in our international expansion strategy. My thanks go to the profine colleagues involved and, above all, to our local partner, who makes such great projects possible with his sustainable quality and service orientation," said Dr. Peter Mrosik, owner and CEO of profine.
